## Claim Rejections - 35 USC § 103

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants' acknowledged prior art in view of Jap. Patent Doc. 10-228201 (JP'201).

The acknowledged prior art, at page 2 of the specification, discloses a fixing roller formed by sandwiching a sheet-like heating element between inner and outer tubes, applying fluid pressure to expand the inner tube to bring the elements into intimate contact. The acknowledged prior art does not disclose inserting the elements into a die in the shape of a reverse crown and applying the fluid pressure to conform the roller to the die shape. However, JP'201 discloses, at Fig. 7 and page 5, paragraphs 0038 and 0039 of the translation, inserting a roller 71 into a die 75 in the shape of a reverse crown and applying the fluid pressure to conform the roller to the die shape. It would have been obvious to incorporate the roller shaping step of JP'201 into the roller forming process as taught by the acknowledged prior art, since JP'201 shows such to be successfully shape a roller, and it would integrate the two manufacturing steps.

While JP'201 does not explicitly disclose arranging an outer ring member prior to applying fluid pressure, such cannot be considered to patentably distinguish the claimed invention from the prior art of record, since any exterior member to which the roller must conform would immediately lend itself to incorporation in the shaping process.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph M Pelham whose telephone number is 571-272-4786. The examiner can normally be reached on M-F 7:30 AM to 4:00 PM.

Application/Control Number: 10/739,221
